

How can I tell if I have the 64-bit edition of Windows?

Answer: Your wallet is empty. Seriously, there is no way you bought an Itanium by mistake. They are expensive machines: The entry-level workstation available from HP (who co-developed the Itanium with Intel) goes for over \$3000 and the entry-level server is over \$13,000. And in addition to paying for the computer itself, you probably had to install a custom air conditioning system for your building to keep it cool.

If you still aren't sure whether you have one, go to Help>About in Explorer. At the top of the About box, it will say "Windows XP 64-Bit Edition" if you have it.
