

A shortcut to the Run dialog

 devblogs.microsoft.com/oldnewthing/20031124-00

Raymond Chen

Here's a little script that opens the Run dialog. You can save it as "Run.js" and double-click it.

```
(new ActiveXObject("Shell.Application")).FileRun();
```

The advantage of this approach over various others people have come up with is that this one is actually documented. (And therefore is less likely to break in the next version of the operating system.)
