An even easier way to get Windows Media Player to single-step a video

August 2, 2011

Raymond Chen

Since my original article explaining how to get Windows Media Player to single-step a video, I've learned that there's an even easier way.

- Pause the video.
- To single-step forward, Ctrl+Click the Play button.
- To single-step backwrd, Ctrl+Shift+Click the Play button.

Backward-stepping is dependent upon the codec; some of them will go backward to the previous keyframe. The person who tipped me off to this feature: The developer who implemented it.

Remember: Sharing a tip does not imply that I approve of the situation that led to the need for the tip in the first place.
