How do I hit the Win+PrintScreen hotkey if my tablet doesn't have a PrtSc key?

Windows 8 added a new hotkey: `Win` + `PrtSc` takes a snapshot of your screen and puts it into the Screenshots folder of your Pictures library. But what if you are on a tablet with no PrtSc key?

On tablets, you can perform the same operation by pressing Windows button + Volume down. Both of these are the hardware buttons on the tablet, not on any keyboard.
