The actors behind the Maze Ransomware have released 2GB of files that were allegedly stolen from the City of Pensacola during their ransomware attack.

Earlier this month, the City of Pensacola was hit with a ransomware attack that impacted the city's email service, some phone service, and caused them to shut down their computer systems.

It was later confirmed by BleepingComputer that they were attacked by the Maze Ransomware who stated they stole data from the city before encrypting the network. They then demand a \$1 million ransom to decrypt their files.

Yesterday, the Maze actors released 2GB of the 32GB of files that they state they stole from the city before encrypting the network.

Proofs

10.21.19.xls

11.18.2019 GISWEBENT.7z (2GB info) IT'S ONLY 10% OF TOTAL INFO WE HAVE, ALL IN GISWEBENT ARCHIVE!!!

Alleged Proofs of Stolen Data

In a discussion with BleepingComputer, the Maze actors stated that they released the stolen data to prove to the media that they steal more than just a few files during a ransomware attack.

"This the fault of mass media who writes that we don't exfiltrate data more than a few files. We did not want to make a pressure on city, we still dont make it right now. We've shown that our intentions are real."

When BleepingComputer asked if they intended to release the rest of the data, they responded with "It depends".

BleepingComputer has also contacted the City of Pensacola, but have not heard back as of yet.
