🚩🚩 ThreatMon's latest #report is out! 🚩 Beware of X-ZIGZAG RAT! 🚩 Download Report 📄 <https://lnkd.in/dpREfFX2> The X-ZIGZAG RAT is a highly sophisticated and stealthy malware, first detected on October 5, 2024 by ThreatMon. This sophisticated malware targets Windows systems and operates entirely in RAM, making it stealthy and hard to detect. It steals sensitive data, executes commands, and can evade detection by recognizing virtual machines. With low antivirus detection rates, it poses a significant threat. Protect yourself with advanced memory scanning, behavior-based detection, and careful network monitoring. Stay safe! #CyberSecurity #Malware #XZIGZAGRAT #DataProtection #ThreatDetection #RAT #RemoteAccessTrojan #Phishing #Ransomware
